EDUCATION

Purdue University

Master of Science in Computer Software Engineering

West Lafayette, IN

Jan 2026 – Dec 2027

Mumbai University

Bachelor of Engineering in Computer Science; CGPA: 8.85/10.0

Mumbai, India

Aug 2019 – Jun 2023

EXPERIENCE

Percipere

Software Engineer (Android & Backend)

Mumbai, India

Jan 2025 – Dec 2025

- Designed and shipped the multi-serial scanning module for **Perci Scan**, an enterprise warehouse management platform in production across four international clients, enabling operators to batch-scan multiple serialized SKUs in a single workflow.
- Integrated low-level **Zebra hardware scanner** SDKs with Android event handlers, handling batch buffering, error recovery, and edge cases in high-throughput warehouse environments.
- Built and consumed REST APIs in **Java Spring Boot** and authored optimized **SQL queries** against MySQL for inventory lookups, contributing backend endpoints from scratch to support new client-side features.

Emerging Automaticity Pvt. Ltd.

Senior Android Developer

Mumbai, India

Jul 2023 – Jan 2025

- Sole architect and developer** of a production Android companion app for Bombay Presidency Golf Club (BPGC) — **500+ Play Store downloads, 4.3-star rating**, used daily by club members.
- Built **real-time GPS deviation tracking** that detects when a player strays from the official course path, using location streaming, geofencing, and polyline-distance calculations.
- Shipped a multi-feature platform end-to-end (tee-off scheduling, in-app food ordering, buggy requests, member booking) over an **MVVM** architecture; reduced application latency by **~30%** via API optimization, response caching, and image-loading improvements.

AuctionSoftware.in

Android Developer

Chennai, India

Dec 2021 – Aug 2022

- Built listing and bidding UI flows for two production auction platforms (flagship app and *Bidnaa*), implementing MVVM architecture and integrating REST APIs for item listings, real-time bid updates, and account management.

Capgemini

Android Developer Intern

Mumbai, India

May 2019 – Jul 2019

- Built **EventOws**, an Android app aggregating local events across the city; codebase retained by the company after the internship.

PROJECTS

ClauseLens — AI-Powered Contract Clause Analysis Platform (*Spring Boot, PostgreSQL, LLM APIs, REST*)

GitHub

- Built a backend-focused legal-tech platform that ingests contracts (PDF/DOCX), extracts and preprocesses text, and runs an **LLM-powered analysis pipeline** with intelligent chunking and prompt engineering to detect and classify **15+ clause types** (termination, indemnification, liability, non-compete, etc.).
- Generated **structured JSON outputs** per clause — category, confidence score, page reference, and low-to-high **risk level** — plus plain-English explanations and risk flags for provisions like automatic renewals and unlimited liability.
- Designed a layered **Spring Boot** architecture (controllers, services, AI/document-processing services, repositories) with **JWT-secured REST APIs** for auth, contract upload, and analysis retrieval, backed by a relational schema linking Users, Contracts, and Clauses in **PostgreSQL**.

Real-Time Damage Detection — On-Device ML for Warehouse Inspection (*Kotlin, TensorFlow Lite, Camera2 API*)

GitHub

- Built a native Android app that classifies product damage (**No Damage / Scratch / Dent**) in real time from a live **Camera2 API** stream, targeting automated warehouse inspection and sorting workflows.
- Deployed a custom-trained, **quantized int8 TensorFlow Lite** classification model ($224 \times 224 \times 3$ input) for fully **on-device, offline inference**; implemented the frame pipeline — capture, resize, normalize, tensor conversion — with live prediction probabilities rendered on-screen.
- Collected and trained on a custom multi-angle, multi-lighting dataset across three damage classes, producing an edge-ready prototype deployable to low-cost devices with no cloud dependency.

TECHNICAL SKILLS

Languages: Java, Kotlin, Python, JavaScript, SQL, C++

Backend & Databases: Spring Boot, REST APIs, FastAPI, MySQL, PostgreSQL, SQLite, Room

Mobile: Android SDK, Jetpack Compose, MVVM, Coroutines, Hilt, Retrofit

Tools: Git, GitHub, Docker, Postman, Firebase, Gradle, CI/CD basics

CS Foundations: DSA (300+ LeetCode problems solved), Operating Systems, DBMS, Computer Networks, OOP Design
