prabhu76@purdue.edu | +1 (765) 532-6698 | vedantprabhu.dev | github.com/vedant7356 | linkedin.com/in/vedantprabhu

EDUCATION

Purdue University

Master of Science in Computer Software Engineering

West Lafayette, IN

Jan 2026 – Dec 2027

Mumbai University

Bachelor of Engineering in Computer Engineering; CGPA: 8.85/10.0

Mumbai, India

Nov 2020 – May 2023

Vidyalankar Polytechnic (MSBTE)

Diploma in Computer Engineering; 91%

Mumbai, India

Aug 2017 – Nov 2020

TECHNICAL SKILLS

Languages: Java, Kotlin, Python, Swift, C++, SQL, JavaScript

Systems & Tools: Linux, Git, Docker, Gradle, Postman, Firebase, CI/CD basics

Backend & Data: Spring Boot, REST APIs, FastAPI, MySQL, PostgreSQL, SQLite

Mobile (Android): Android SDK, Jetpack Compose, MVVM, Coroutines, Hilt, CameraX, TensorFlow Lite

Mobile (iOS): Swift, SwiftUI, UIKit, Combine, async/await & structured concurrency, Core Data / SwiftData, URLSession

CS Foundations: Data Structures & Algorithms (300+ LeetCode problems solved), Operating Systems, DBMS, Computer Networks, OOP Design

EXPERIENCE

Percipere

Software Engineer (Android & Backend)

Mumbai, India

Jan 2025 – Dec 2025

- Designed and shipped the multi-serial scanning module for Perci Scan, an enterprise warehouse management platform live across four international clients — batch scanning of multiple serialized SKUs with in-app inventory visibility in a single workflow.
- Integrated low-level Zebra hardware scanner SDKs with Android event handlers, engineering batch buffering, error recovery, and edge-case handling for high-throughput warehouse environments.
- Built REST APIs in Java Spring Boot and authored optimized SQL queries against MySQL for inventory lookups, profiling and tuning slow queries on high-volume tables.

Emerging Automaticity Pvt. Ltd.

Senior Android Developer

Mumbai, India

Jul 2023 – Jan 2025

- Sole architect and developer of a production companion app for Bombay Presidency Golf Club — 500+ downloads, 4.3-star rating, used daily by club members.
- Built real-time GPS deviation tracking from streaming location data, implementing geofencing and polyline-distance computations to detect course-path deviation with low latency.
- Reduced application latency by ~30% through API optimization, response caching, and image-loading improvements across a multi-feature MVVM platform.

AuctionSoftware.in

Android Developer

Chennai, India

Dec 2021 – Nov 2022

- Built listing and bidding flows for two production auction platforms, integrating REST APIs for item listings, real-time bid updates, and account management.

Capgemini

Android Developer Intern

Mumbai, India

May 2019 – Jul 2019

- Built EventOws, an Android app aggregating local events across the city; codebase retained by the company after the internship.

PROJECTS

Real-Time Damage Detection — On-Device ML Inference Pipeline (Python, TensorFlow, Kotlin, Camera2 API)

GitHub

- Trained and quantized a custom int8 TensorFlow image classifier in Python (224×224×3) for fully offline, on-device inference classifying product damage (No Damage / Scratch / Dent) from a live camera stream.
- Implemented the full real-time frame pipeline — capture, resize, normalize, tensor conversion, inference — rendering live prediction probabilities on-screen, targeting automated warehouse inspection workflows.

ClauseLens — AI-Powered Contract Analysis (Kotlin, ML Kit OCR, OpenAI API, Room)

GitHub

- Built an end-to-end document analysis pipeline: PDF rendering, on-device OCR, and clause segmentation via heading detection and legal-keyword heuristics, feeding LLM-based classification, risk scoring, and contract comparison.
- Engineered a tiered LLM integration with automatic model fallback and an offline Room caching layer persisting every analysis, eliminating repeat API calls; secrets injected at build time, kept out of source control.

FloraLens — Hybrid On-Device + Cloud Plant Identification (Kotlin, TensorFlow Lite, Jetpack Compose)

GitHub

- Built hybrid inference over a CameraX capture pipeline — an on-device TensorFlow Lite classifier for instant, private results with a cloud mode extending coverage — in a layered, offline-capable architecture with Room, Hilt, and WorkManager.
